Every field on a card, where it comes from, and when a blank is legitimate

The checklist for going through a live card one field at a time. The card's layout and display rules are in CARD.md; how each value is fetched and processed is in DATA-PIPELINE.md.

A blank is not automatically a bug. Some fields are blank because a job has not run — those are fixable. Others are blank because the honest answer is "no answer", and filling them would mean inventing a number. The third column says which, so the two are never confused.

`SOURCE` is what has to be working for the field to have a value:

tag	means
TV	the TradingView screener, on every scan
BARS	daily price bars, fetched per card
EDGAR	the SEC filings cache — `deploy/run_edgar.py`
QP-M	the market model — `data/oneil-market.json`
QP-L	the group ranks — `data/oneil-groups.json`
QP-I	13F — `data/oneil-13f.json`
NEWS	the news feed
DESK	computed on the desk from fields above

Header

#	Field	Source	Blank means
1	Ticker	TV	never blank
2	Price	TV	never blank
3	Change %	TV	never blank
4	Live badge	DESK	not in the live window
5	Sector · Industry	TV	**BUG** — TV always sends it
6	Score	DESK	**BUG**
7	Bucket (B4/B5 main)	DESK	**BUG**
8	First seen · mins before open	DESK	**BUG**
9	Trigger badges (Big Move, Pre-Mkt)	DESK	no trigger fired — normal
10	HOT	DESK	not hot — normal
11	Catalyst badges	NEWS	no catalyst in the window — normal
12	MA flags ▲▼ (5, 9, 13, 20, 50, VWAP, PDC, OPEN, PMH, PML)	TV	a flag missing = that MA has no value (see EMAs)
13	Stack (9<13<20<50)	DESK	an EMA is missing
14	Quarter range (Q1–Q4)	TV	no month range
15	PM/ADR band	DESK	no pre-market range

Volume & Float

#	Field	Source	Blank means
16	RVOL	TV	**BUG**
17	Market Cap	TV	**BUG**
18	Float	TV	TV has no float for this ticker — happens on new listings
19	Short %	FINRA → Yahoo → Nasdaq	no short interest reported; TV never serves this field
20	Days to cover	DESK	needs short interest **and** average volume

Range

#	Field	Source	Blank means
21	W position %	TV	**BUG**
22	M position %	TV	**BUG**
23	Q position %	TV	under a quarter of history
24	Y position %	TV	under a year of history

News

#	Field	Source	Blank means
25	Catalyst label	NEWS	nothing classified — normal
26	Story count	NEWS	“nothing in three weeks” is a real answer
27	Top headline	NEWS	as above

CANSLIM — the one-line summary

Each letter is the summary of its full table below. A letter missing from the summary appears in the “Not shown:” line with its reason.

#	Field	Source	Blank means
28	C — EPS %chg · sales %chg · quarter	EDGAR	not walked yet, or no filings
29	C — accelerating · beat +25%	EDGAR	no quarter had a comparable base
30	A — 3yr · wobble · ROE	EDGAR	see A table
31	N — weeks · depth · handle	BARS	under 7 weekly bars
32	N — pivot · % away · checks	BARS	as above
33	S — U/D · A/D	BARS	under 3 / 10 sessions
34	L — group · rank · RS in group	QP-L	see L table
35	I — funds · change · direction	QP-I	13F not built, or CUSIP unmatched
36	M — status · DD live	QP-M	market model not built
37	M — on the DD days	QP-M + BARS	no distribution days yet

Relative strength

#	Field	Source	Blank means
38	RS line — % off its own high	BARS	under 30 sessions
39	Divergence	BARS + index	needs 60 sessions and an index low

FULL TABLES

C — current quarterly earnings

One row per quarter, eight quarters.

#	Column	Source	Blank means
40	Qtr — column header reads `3 mo to`	EDGAR	never blank if the row exists. See field 50: the same date can head a 12-month row in A
41	EPS $	EDGAR	the filer tagged sales but not EPS that quarter
42	**Yr ago (EPS)**	EDGAR	no quarter within 45 days of one year back
43	%Chg (EPS)	DESK	`n/a (loss a year ago)` — **correct**, a % from a negative base has no meaning. `n/a` alone = no year-ago quarter
44	Sales	EDGAR	filer tagged no revenue
45	**Yr ago (Sales)**	EDGAR	as 42
46	%Chg (Sales)	DESK	`n/a (no sales a year ago)` — correct for a pre-revenue company
47	Margin	DESK	needs net income and revenue. Capped at ±999%
48	Accelerating: yes/no (last N quarters)	DESK	N=0 means no quarter had a % — normal for a loss-maker
49	Beat +25%: X of Y	DESK	Y=0, as above

A missing Q4 is deliberate when EPS and net income disagree on the sign — the share count moved and the subtraction would be fiction.

A — annual earnings

#	Column	Source	Blank means
50	FY — column header reads `12 mo to`	EDGAR	never blank if the row exists. A fiscal year and its own fourth quarter END ON THE SAME DAY, so this date also appears in C under `3 mo to` with a different (three-month) figure. Both are correct
50a	**From 4 qtrs**	DESK	the year added up out of the C table, so the two can be checked against each other. `N of 4` when fewer are on file — a sum over three would read as a discrepancy in the filings; `—` when none are
51	EPS $	EDGAR	no annual EPS tagged
52	%Chg	DESK	`n/a (no prior year filed)` = a gap in the filings. `n/a (loss a year ago)` = correct
53	ROE	DESK	`n/a` = **equity is zero or negative** — correct, not a return
54	3-yr growth	DESK	needs 4 unbroken years **and a positive base year**
55	Stability	DESK	needs 4 annual rows. LOW IS GOOD
56	ROE vs the 17% floor ✓/✗	DESK	no ROE to compare

N — the base (weekly)

#	Field	Source	Blank means
57	Summary (weeks, depth, waves, accumulation, handle)	BARS	under 7 weekly bars
58	Lip price and week	BARS	as above
59	Low price and week	BARS	as above
60	Depth % over N weeks	BARS	as above
61	Waves down	BARS	as above
62	Accumulation weeks	BARS	0 is a real answer, not a blank
63	Handle	BARS	“none yet” is a real answer
64	Pivot · % away · X of 6 checks	BARS	as above

S — supply

#	Field	Source	Blank means
65	Shares outstanding	EDGAR	no share-count tag in the filing
66	Basis (cover / balance sheet / issued / weighted avg)	EDGAR	shown only when it is **not** the cover figure
67	As of	EDGAR	as 65
67a	**Share count %chg over ~1yr + buying back / diluting / flat**	DESK	never blank when 65 exists — it says which reason instead: `only one count on file` or `too bunched to give a rate`. Both are correct answers, not gaps
67b	**The two counts and dates it compared**	EDGAR	as 67a. Always from the SAME tag — a cover-page count against a weighted average would invent a buyback
68	Float	TV	TV has none for this ticker
69	Float as % of shares outstanding	DESK	needs both 65 and 68
70	Short interest % + basis + as-of	FINRA → Yahoo → Nasdaq	not reported
71	Days to cover	DESK	needs 70
72	U/D volume over N sessions	BARS	under 3 sessions, or no down-day volume
73	A/D grade + raw over N sessions	BARS	under 10 sessions

“N sessions, short of 50/65” is the correct label on a young stock, not a bug.

L — leader or laggard

#	Field	Source	Blank means
74	Group name	QP-L	see below
75	Rolled up marker	QP-L	absent = a real named industry, which is the normal case. `rolled up` = ranked at the SIC **industry group** (3-digit) because its own 4-digit industry had under 6 ranked names. `rolled up twice` = the **major group** (2-digit), because neither rung below had enough — a materially coarser claim
76	Rank X of Y	QP-L	—
77	Percentile + letter	QP-L	—
78	RS X of N in its group	QP-L	—
79	Rotation ▲ into / ▼ out of	QP-L	under a quarter of cached sessions

Three reasons L can be absent, and only the first is fixable by waiting:

1. `group ranks not built yet` → run the nightly job
2. `in <industry>, but no RS rating` → the stock is under a year old. **Correct**
3. `not in the industry map` → an ETF, or EDGAR has no SIC code

I — institutional sponsorship

#	Field	Source	Blank means
80	Holders	QP-I	not built, or the CUSIP did not resolve. Distinct MANAGERS, by CIK: unioned across every CUSIP of the issuer (the stock, its converts and its options are one company) and across a 13F-HR and its 13F-HR/A (one manager, not two)
81	Change	QP-I	only one quarter on file
82	Direction	QP-I	as 81
83	Quarter history	QP-I	as 80
83a	**“of N” — managers who filed a 13F at all that quarter**	QP-I	absent on a file built before this existed; the count still shows. Without it a growing filer population reads as sponsorship arriving
83b	**“counted by FILING” warning**	QP-I	absent is the normal case — it appears only when a quarter was cached before `SUBMISSION.tsv` was read, so amendments are not collapsed and every figure on the row runs high
83c	**Share of filers, per quarter**	QP-I	absent on a file built before this existed. `holders / managers who filed`, and the only form the direction is read in
83d	**Direction (from the SHARE) + % move**	QP-I	needs two quarters. Relative, not points, with a 3% dead band — half a point is noise at 70% and a fifth of the position at 3%. The raw holder change is printed beside it, uncoloured, because it is a fact and not the reading. Five readings: `rising` (up over the year and still up), `peaked` (up over the year, newest quarter down), `flat`, `falling`, `turning up` (down over the year, newest quarter up). Only `rising` and `turning up` are coloured bullish
83f	**Newest quarter %**	QP-I	needs two quarters of share. The step that separates `rising` from `peaked`, so the reading can be checked rather than believed
83e	**“direction from the RAW count” warning**	QP-I	absent is the normal case — it appears only when the filer population for those quarters is unknown

M — market direction

#	Field	Source	Blank means
84	Status	QP-M	not built
85	Distribution days live	QP-M	0 is a real answer
86	This stock on those days: X of Y	QP-M + BARS	no distribution days to check
87	Verdict (HOLDING UP / GIVING WAY)	DESK	as 86
88	Sources line — EDGAR, groups, market, 13F dates	all	each says “pending” when its file is missing

Market Context, Price, EMAs, ATR, Pre-market

#	Field	Source	Blank means
89	Regime · long · short	DESK	**BUG**
90	Price, Prev Close, VWAP, Open, Gap %	TV	**BUG**
91	5-day MA	TV	under 5 sessions
92	EMA 9 / 13 / 20 / 50	TV	under that many sessions — a new listing legitimately has no EMA 50
93	ADR $ / ADR %	TV	**BUG**
94	Move (× ATR)	DESK	needs ADR
95	Day High / Low	TV	**BUG**
96	PM High / Low / Range	TV	no pre-market trading — normal on a thin stock
97	PM / ADR	DESK	needs 96 and ADR

How to check without reading a card

```
cd ~/Tade-desk-server/quant-platform
set -a; . ./.env; set +a; python3 -u deploy/run_fields.py RDAC FRVO BIAF
```

Prints every CANSLIM field per stock with the reason beside each blank. `deploy/run_status.py` answers the other question — whether each job has run at all.
