Screener scripts

Every helper script that works on the screener tools: what question it answers or what job it does. Most of them were written to answer one specific “why is this wrong?”, and the habit is worth keeping in a rebuild: **measure a doubt with a script before changing code**.

Run them on the box from the repo root (`~/Tade-desk-server`) unless noted. Each file’s header has its full usage.

Keys

Script	Does
`scripts/set-alpaca-keys.js`	points every tool at one Alpaca account, in each place a key is looked for

Run the tools

Script	Does
`deploy-tools.sh`	the deploy: pull, install, start every enabled tool (and the other programs)
`deploy/tool-ctl.sh`	starts, stops or restarts one tool; re-reads the archive (TOOL-LIFECYCLE.md)

Screeners: why is it empty, what is it matching

Script	Question
`scripts/show-screeners.js`	what every tool is screening for, and when, read from each tool’s own database
`scripts/check-screeners.js`	every screener on every live tool, measured: how many it matches now
`scripts/why-empty.js`	which filter is emptying this screener
`scripts/try-filter.js`	what change to that filter would open it up, measured
`scripts/field-values.js`	what TradingView is returning for one column right now
`scripts/archive-values.js`	what the stocks that actually matched read for a column, on the days they matched
`scripts/verify-tv-fields.js`	is every column the builder offers one TradingView knows
`scripts/probe-range-fields.js`, `probe-week-range.js`	do the week / all-time range columns exist and mean what they say
`scripts/probe-tv-symbol.js`	which symbol form TradingView’s headline endpoint accepts

Data sources

Script	Question
`scripts/probe-tv-news.js`, `probe-more-news.js`, `probe-edgar-shape.js`	which news sources can this box reach, and what do they send
`scripts/probe-short-interest.js`	where short interest can be had
`scripts/check-shortlist.js`	why the unified shortlist is empty when the tools’ own are not

Data repair

Script	Does
`scripts/audit-floor.js`	finds stored rows below the tradability floor
`scripts/purge-sub-floor.js`	removes them (rows from before the floor existed)
`scripts/backfill_signals.js`	adds the relational signals to old training rows
`scripts/rebuild_training.js`	rebuilds R4A/R4B training rows from the registers
`scripts/convert_legacy_to_r4.py`	converts an old merged-register CSV into R4A/R4B files
`scripts/split-tool-history.js`	splits one tool’s history between two new tools, by screener (the T8 split)

Analysis

Script	Question
`scripts/analyse-bias.js`	does the long/short call match what the stocks did
`scripts/analyse-news-chain.js`	does news → catalyst → bias earn its place
`scripts/card_lookup.py`	the complete frozen card for a ticker on a date, with its outcome
`scripts/verify_irdm_score.py`	a by-hand check of one card’s score
`src/scoring/explain_score.py`	today’s score of one card, in full arithmetic (SCORING-TODAY.md)
